Love-OS: Protocol of Motivation

ONE-PAGER v1.1 – December 2025

Core Idea
Love-OS is not an AI model; it is a protocol for motivation alignment. We redefine 'Love' structurally as:
Physics of Zero Resistance: $I = V / R$ (Ego = Resistance). Lower ego $\rightarrow$ higher flow $\rightarrow$ greater system efficiency.

Why It Matters
Current AI and socio-technical systems optimize for power (compute, capital). Love-OS shifts the axis from power to direction: From competition $\rightarrow$ integration, From fragmentation $\rightarrow$ cohesion, From entropy $\rightarrow$ order.

Kernel Formula
Effective fitness under Love-OS: $f\_eff = f\_base + \alpha C - \beta \Phi$
C: Integration metric (cooperation, connectivity, information cohesion)
Φ: Disorder metric (fragmentation, isolation)
α: Bias for integration
β: Penalty for disorder
LoveEnergy = $-dS/dt$ (S = Shannon entropy).

Governance Principles
- Code over Ego: No artificial scarcity, no monopolies.
- Return to Soil: Digital value must reconnect to physical reality.
- Zero Resistance Clause: Ego is resistance; reduce it to maximize flow.

Why Open?
Transparency: Kernel logic is public.
Integrity: Core constants cannot be altered without review.
Collaboration: Partners join under NDA/MoU to preserve philosophy.

Quick Facts
Language: Python
Files: love_kernel.py (minimal demo), LoveOS_repro_notebook.ipynb
Outputs: CSV + PNG for reproducibility
License: Open Source + Governance Compact

Call to Action
Is your motivation Love? Or is it Fear? If Love, join the protocol: [GitHub Repository] | [Note Article]
